

**Note Language:** English

**Version:** 9

**Validity:** Valid from 14.02.2007

## Summary

### Symptom

You need to know which version of which screenreader is supported for SAP products.

### More Terms

Screenreader, JAWS, accessibility

## Cause and Prerequisites

### Solution

If you require a screenreader or a speech output program, we recommend that you use the following programs with SAP products:

- o **JAWS for Windows** from Freedom Scientific, Version 7.10

We intend to check a higher release as soon as possible.

By publishing the SAP GUI object model, SAP made it technically possible for screenreader programs to be used in conjunction with SAP GUI. SAP currently only supports JAWS for Windows.

Note the additional technical requirements for accessibility. You will find these in the SAP Library under **Accessibility**.

Note:

SAP does not provide users with any electronic tools (such as screenreader programs, speech output programs, dedicated hardware resources) required for working in accessibility mode.
